OKY-Empowering Women

UNICEF- C4GT 2024

Name: Sourabh awasthy

Institute: National Institute Of Technology , Hamirpur (NITH)

Place: Himachal Pradesh, India

Degree: Bachelor of Technology(ECE)

Year: Sophomore (2nd)

Email:sourabhawasthy176022@gmail.com

Project: Enabling Oky code to run on Windows and Linux computers

Other details:

Phone no. : 9418223946

Discord-Id: sourabh1889

LinkedIN profile: this is the link to my linkedIn Profile.

Github profile: this is the link to my Github Profile(**Sourabh-awasthy**)

Personal website: this is the link to my personal portfolio website.

Skills:

Technologies/Languages:

JavaScript(Intermediate),Git/Github(Intermediate),C/Cpp(intermediate)

,TypeScript(Intermediate),Python(Intermediate),Rust(Novice)

FrameWorks/Libraries:

React,React Native,Node Js,Expressjs,Jquery,Bootstrap,TailwindCSS-(Expert)

Three Js,FramerMotion-(Novice)

Cloud/Databases: MongoDB Atlas- Intermediate

Tools/Others: Blender,Microsoft office 365, Postman,VS code, MS Clipchamp, Canva.

Soft Skills: Good leadership and communication skills,A team player.

Areas of Interest: MERN stack development,Programming,3d animations.

About Me

I'm a second-year Electronics & Communication Engineering student at NIT Hamirpur, passionate about technology. Proficient in JavaScript, React,React-native,Typescript, Node.js, MongoDB, HTML/CSS. Experienced in real-world projects, hackathons, and community service. Eager to join "oKy" to delve into Open Source, collaborate, and enhance my skills.

Experience:

- Full Stack Web Developer Intern At Dovetail Solutions
    - Developed the complete frontend and backend of an Order Management System(OMS) using React , Nodejs and MongoDB.
    - Identified software and DataBase architecture based on project's requirements myself.
    - contributed to making a cross platform mobile app using **React-Native**

- Front-End Engineering Intern At Sankalp Shiksha
    - Created Frontend using React for the official website in collaboration with other team members and NGO maintainers.

- Executive Member At ISTE_NITH
    - Collaborated with other tech-team members to create various websites including Prodyogiki 2024- an annual technical event of our society .

Availability:

I reviewed the whole C4GT timeline and I would be able to devote about **4-5 hours** every day to C4GT.

I will be devoting my full time to this project and I do not have any other running internship or upcoming Summer internship or Job at that time. I have no obligations after May, and would be devoting all my time to C4GT. I will be reporting my work over the daily discussions on the community's page. ***I would strive to be regular, and sincere with my scrum and daily updates as I understand that selection in this project will require a serious commitment and 100% devotion from my side.***

Expectation From C4GT and Unicef(Motivation):

C4GT is a great set point to start my **OpenSource journey** and it is also a great opportunity to enhance my programming skills and develop some more insights towards production level project development. It is a great chance for students like me to work on a project that really matters. I will get a chance to work with world class developers which will include lots of learning and a boost to my enthusiasm. I am interested in the project - "**Enabling Oky code to run on Windows and Linux computers**" because this project will help me improve my knowledge by giving me deep insights to work on my previous skills and implement

them on a bigger scale.Also this project will help me to contribute to the community for women empowerment. In my opinion ,open source development can be life changing that will inspire community growth,learning together and development. Its results can be remarkable, profound and enduring. C4GT program have the capacity to transform individual

groups, organizations, and communities. It can be very proud to know that you've directly contributed to an organization like **UNICEF.** Thus, I see participating in this year's C4GT with Unicef as a great opportunity to make use of my good technical and communication skills to develop a next generation project and experience the guidance of mentors.

Summary / Overview

Currently the **Oky provides** information about menstruation in fun, creative and positive ways but its code presently runs on Mac and cant be deployed using WIndows and LInux Operating Systems. So it is required to code Oky in the latest tech stack and to be accessible in cross platform (ios and Android)

Project Goals

During this C4GT term, I would deliver the following:

1. **Oky code working on Linux and windows:** I will be creating Oky in React Native so that it can run with the latest iOS and Android versions and also can be accessible using Windows and Linux.

2. **The CMS, the mobile apps (android and iOS) and the backend run independently of the operating system :**
We will be using Node Js for backend which can easily run in any operating system and for Database we will be using MongoDB atlas as it is already deployed on Mongo servers and there are no compatibility issues of any type.

2. **Improved Oky Ui with 3d blender animations :**
In making the new improved UI of OKy we will be making it simpler to use but attractive . We can use pre-made animations on blender or any other platform for appealing visuals.

Some More Proposed Features:

1.**Community page :** A community page in the app for women.

Timeline/Project Plan:

Time Frame	Start Date	End Date	Task	Milestones
Community Bonding	—	1st June	(official C4GT start timeline)	
Coding Begins (Setup)	1st June	3th June	Setting up the local server , database and native editor	A template of the app will get ready
Backend with dummy data	3th June	20th June	Completing the backend Api in nodejs	Completed with backend authentication
	20th June	21th June	Testing and reviewed changes	Backend is completed
Frontend on React-Native	21st June	4ST July	Making a eye-catching UP with simpler UX for Calender,Encyclopedia and daily diaries	Hard coded React Native pages
Integration	4st July	6th July	Oky app is ready with some reviewed or suggested changes	Users can now use Oky mobile app in Android and ios
User community page	6th July	11th July	Making a user community page	User can now connect with each other

Evaluation			Making the reviewed changes after the evaluation.	Project Completed!!!!!

Relevant Past Experience:

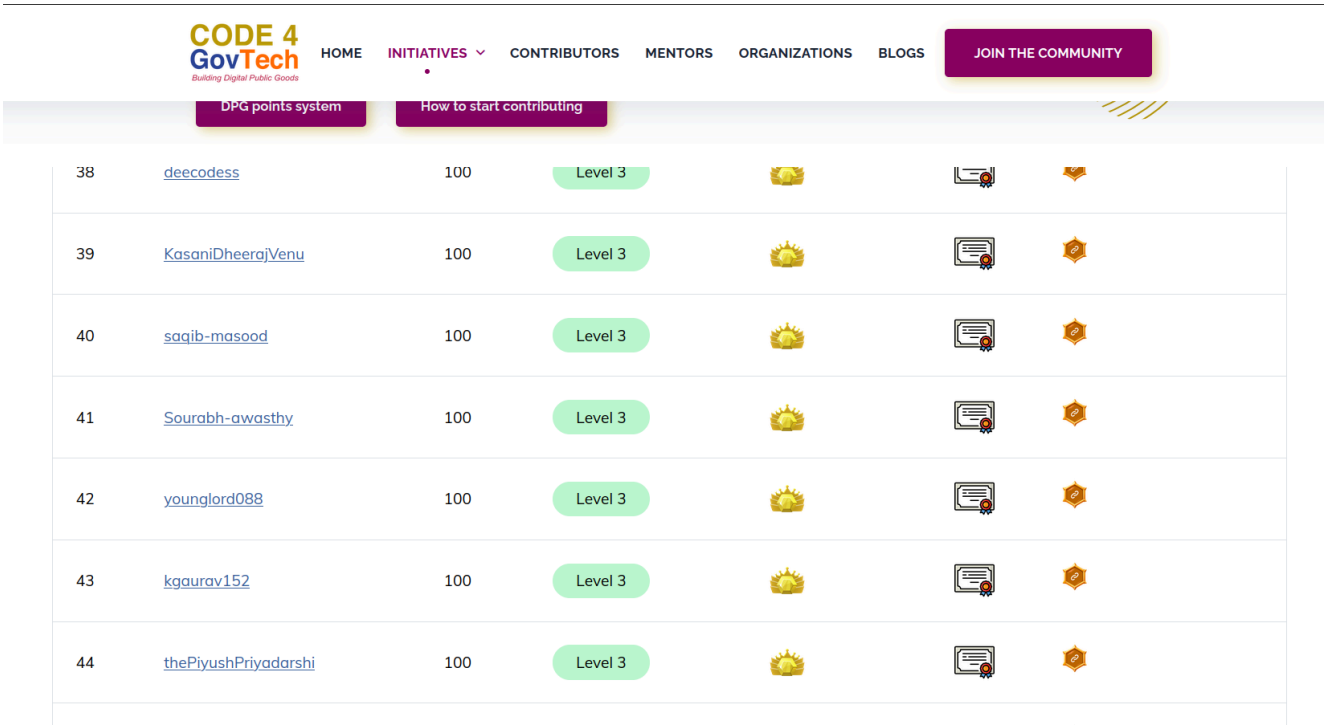
- **INTERN (**at dovetail solutions)
  Made a Content Management System using Latest tech stack(MERN) integrated with a React native app.

Contribution in C4GT's open community:

1. Have you contributed to tickets in C4GT's open community? -**No**
2. Have you successfully completed C4GT's GitHub Classroom Assignment?- **Yes**

DPG-POINTS : 100

Screenshot of leaderboard:



Github-Id: Sourabh-awasthy, Position *41* (level 3)

I am confident that I will be able to meet the timeline outlined above without encountering any significant obstacles. In the event of any technical or academic challenges, I am prepared to proactively address them to ensure the timely completion of my project, fulfilling my commitments.

I can assure you that if I get selected to work IN OKY this summer, I definitely will try my level best to make this project successful and will love to continue working with Unicef's other projects even after the summer.

Looking forward to working with you.

Thanks And Regards

Sourabh Awasthy.
